I honestly state that the subject of the proposed project is different from the subjects of the dissertations of each of the members of its solver team, as this project does not coincide with a closer definition of the issue examined, the methods used and the stated aims of the work in question.

I honestly state that I will not draw funds from other EU financial instruments, National programmes and other grant programmes for eligible costs of submitted Student Grant. At the same time, co-funding from dedicated support for specific university research (e.g. IGA) will not be used to address this submitted grant.
